

PSYCHOLOGICAL SCIENCES, UNIVERSITY OF MISSOURI

JOIN THE SCANLAB AS A VOLUNTEER RESEARCH ASSISTANT

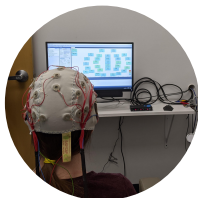

The **Social Cognitive and Addiction Neuroscience Lab (SCANlab)**, directed by Dr. Bruce Bartholow, is inviting highly motivated undergraduate research assistants to get involved in research related to alcohol use/addiction, reward processing, and attention control.

Research assistants work closely with our research team (which includes faculty, research specialist, post-doctoral and doctoral students, and other research assistants). Working in a psychology lab is a great way to learn what doing research is really like, to gain experience needed for applying to grad school or med school, and to learn unique skills that can be useful in students' future careers, whatever they might be.

Ideal candidates have a **minimum GPA of 3.0** and are able to commit at least **10 hours per week**. Because there is extensive training involved, preference will be given to research assistants who are able to commit to working at least two semesters. Students can either work in the lab for **course credit (PSYC 2950 or 4950)** or simply volunteer.

Duties vary but typically include assisting with running laboratory sessions, collecting electroencephalogram (EEG) data (i.e., "brain waves"), and performing data entry and quality control. For more info: mualcoholstudy@missouri.edu.
